Lab 3 Report

CS 5551

2/10/2016

This lab was week number 2 for Android Studio. I feel I am learning more about the interface and becoming more familiar with the requirements and how objects link from one page to another. I learned how to obtain google API keys and can continue to do so. I realized how many files have to be updated, and there are quite a few of them. Unable to understand why some things were not working before,like imports, I was frustrated. Now I understand that there is an entire other page that needs to be updated. I found out that the build gradle has dependencies that are required to be compiled in order for necessary components to be available for import. I felt like that, specifically held me up on Lab 2. Perhaps for future lectures that can be touched upon for those of us who have never seen android studio.
